

InLine Silencer

Hvac Transfer Duct

What is a InLine Silencer ?

The InLine Silencer is a apathetic device that when installed assists with the attenuation of noise levels being transmitted through the duct system.

The InLine silencer is a completely passive device that will not impede airflow when attached to the existing ductwork. Made of metal and lined with acoustic mineral liner. The Inline Silencer is easy to install and available in 2 diameters - 5" and 6".

How would I use a InLine Silence?

Excellent for loud, annoying sounds travelling throughout your duct work from source such as noisy air handlers, fans, loud furnaces and air-conditioning systems. It virtually eliminates the transmission of voices, music and home-theater systems from travel from one room to the next.

There are many uses for the InLine Silencer here are just a few examples:

- Home Theater Noise Reduction
- Conference Room Noise Reduction
- Lecture Hall Noise Reduction
- Music Studio Noise Reduction
- General Household Noise Reduction
